PROFESSIONAL SUMMARY

Software Engineer with experience building business and enterprise applications across the full stack. Strong background in backend development - API design, relational database modeling, and event-driven communication - with hands-on frontend experience in Angular, React.

At **NICE**, I worked on the backend of a .NET monolith application, where I delivered epic stories and refactored APIs to make the code better. I also helped the team migrate our frontend to Angular and React. During this migration, my main job was to support the process and fix the bugs that appeared during the transition. I also used AI agents and Claude Code to help improve our daily workflow. At **CIN**, I worked with a mix of technologies like Spring Boot, .NET, and React. I was highly involved in designing the architecture of the projects. My biggest task there was connecting different business systems so they could talk to each other, which I did by implementing RabbitMQ and MassTransit.

TECHNICAL SKILLS

Backend: .NET, Spring Boot, Java, C#, REST APIs

Databases: SQL Server, PostgreSQL

Messaging: RabbitMQ, MassTransit

Frontend: Angular, React.js, TypeScript, JavaScript, HTML, CSS

Cloud & DevOps: Docker, Git, AWS (EC2, S3)

QA Automation: Playwright, Selenium

AI & Tooling: Claude Code, AI agents, prompt engineering

PROFESSIONAL EXPERIENCE

Software Engineer

Nov 2025 - Present

NICE Ltd. - Enterprise Software

- Contributed to a large-scale legacy .NET monolith, supporting refactoring efforts and resolving bugs across the codebase.
- Participated in frontend migrations from the monolith to Angular and React, building new features and fixing issues during the transition.
- Automated test cases in Selenium and Playwright and executed regression test sets, tracking coverage across release cycles.
- Built custom AI agents, skills, and commands using Claude Code to automate repetitive development workflows and improve team efficiency.

Software Engineer

Jan 2025 - Oct 2025

CIN - Beverage Distribution Company

- Designed and maintained relational databases (SQL Server, PostgreSQL) across multiple business systems covering purchases, sales, distribution, inventory, and HR.
- Implemented event-driven inter-system communication using MassTransit and RabbitMQ, enabling reliable message exchange across services.
- Developed and maintained backend services using Java + Spring Boot and C# + .NET, with React + TypeScript on the frontend side.

EDUCATION

B.Sc. in Systems Engineering

2017 - 2024

Universidad Mayor de San Simón - Cochabamba, Bolivia

Postgraduate Diploma in Enterprise Software Development

2023 - 2024

Universidad Mayor de San Simón - Cochabamba, Bolivia - Specialization: Spring Boot, React.js, PostgreSQL

COURSES

Hands-On Advanced SQL Server: Strategies and Techniques - LinkedIn Learning - 2026

AI-Powered Software Development: Coding, Testing, and System Design - LinkedIn Learning - 2026

C# and .NET Essential Training - LinkedIn Learning - 2026

Creating Spring Boot Microservices - *LinkedIn Learning* - 2026

Introduction to AWS Course: Cloud Computing Fundamentals - *Platzi* - 2026

Introduction to AWS: Compute, Storage, and Databases - *Platzi* - 2026

LANGUAGES

Spanish - Native

English - Intermediate (B1)
